ARESTIN

ARESTIN® (minocycline HCl) Microspheres, 1mg is used in combination with scaling and root planing (SRP) procedures to treat patients with adult periodontitis (gum disease). ARESTIN® may be used as part of an overall oral health program that includes good brushing and flossing habits and non surgical gum therapy treatment.

- After treatment, patients should avoid chewing hard, crunchy, or sticky foods (i.e., carrots, taffy, and gum) with the treated teeth for 1 week, as well as avoid touching treated areas.
- Patients should also postpone the use of interproximal cleaning devices (i.e., floss threaders, toothpicks, proxy brushes, etc.) around the treated sites for 10 days after administration of ARESTIN.
- Patients should be advised that although some mild to moderate sensitivity is expected during the first week after non-surgical gum therapy and administration of ARESTIN, they should notify the dentist promptly if pain, swelling, or other problems occur.
- Patients should be notified to inform the dentist if itching, swelling, rash, papules, reddening, difficulty breathing, or other signs and symptoms of possible hypersensitivity occur.

Please call our office(s) if you have any additional questions or concerns:
